SINCE-1984

Discover The CST Difference®

MONO-CAST® One Piece Pavers & VERSA-LOK® Retaining Walls

THE CST DIFFERENCE IS...

Best value: As we always say, “You can pay more but you cannot buy a better product.”

Local roots: All of our concrete products are made in the USA.

Friendship: It’s the foundation upon which we build our relationships. Friendship virtually eliminates the competition. Your fiercest competitor couldn’t blast you away from a good friend.

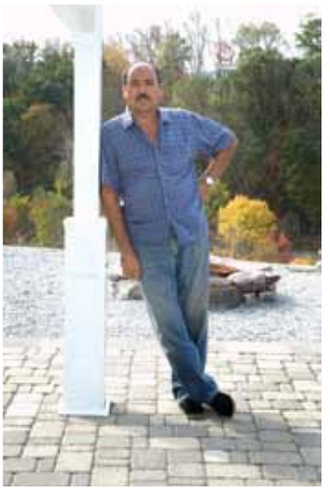
Communication: Machines don’t answer the phones, we do.

Responsiveness: Same day reply to customer request.

What our customers are saying...

"I chose CST because I was extremely happy with the support from the House Call program, from the knowledgeable sales rep, helpful ideas on product, color and layout. This project turned out to be one of the less stressful projects that I have completed at my home. From the initial contact, sales rep, professional installer and quality product, I could not of asked for any more."
Thank You CST

Rodney Tannenbaum



"We had a pretty good idea of what we wanted in our yard. However, Mark Pitcher of CST was able to provide suggestions and experience to help us along. It was truly perfect, and the craftsmanship was incredible. The project as a whole was better than we ever had anticipated."

John Lunghi

"Through the CST House Calls Program a CST Representative helped us every step of the way. CST Pavers have added an extra level of quality to summertime living. This has given us many years of pleasure".

Peter and Chrissy Callas

"CST offered me the flexibility to integrate the walls, borders, patios and driveways with the cedar shakes of the house. The Brown Flash matches the house and ties the property to the house. With CST the color was perfect.
CST worked with me from the earliest stages through delivery,

maintaining a steady flow of product throughout the project.
CST also helped me in the selection process of finding a contractor. Whatever it was I needed, I knew CST was there to help assist me."

Jack Frazier

How about a House Call?

That's right. CST makes House Calls. Visit www.cstpavers.com and sign up for a FREE in home consultation. A knowledgeable CST sales representative will make an appointment to visit you at your home with project ideas, samples and literature. Let the experts at CST give you some advice, answer any questions you may have and provide you with helpful tips on how you can make your project something special.

Questions? Ask Steve, CST's virtual know-it-all.

How high can I build my retaining wall? Can a snow plow damage my pavers? How do I replace a stained or damaged paver?

Click "Ask Steve" at www.cstpavers.com and get your answers. Steve is ready when you are.

CST MONO-CAST®
A One-Piece Process

Unlike some other manufacturers who use a "two-piece process" in their production of paving stones, CST has remained committed to their philosophy of solid "one-piece construction" for their paver and VERSA-LOK® wall products. This means the concrete and color are mixed and poured together creating a one-piece product with the same color and consistency throughout. CST is confident that this is the most reliable way to guarantee long-term color, strength and durability.

Face Mix:
A Two-Piece Process

A Face Mix is a common manufacturing technique used in the industry to save on the cost of color. A face mix has two mixes applied during the stone's manufacturing. A base mix fills the mold to create the paver, and then a thin topcoat with the color is applied to finish the manufacturing process.

The CST Difference is...

MONO-CAST® process is only part of the equation because what really sets CST apart from the competition is our service and commitment to you. Let us show you the difference.

How about a House Call?

That's right. CST makes House Calls. Visit www.cstpavers.com and sign up for a FREE in home consultation. A knowledgeable CST sales representative will make an appointment to visit you at your home with project ideas, samples and literature. HOUSE CALLS™
Ideas, Advice and Support

Mono-Cast® Pavers and VERSA-LOK® Wall

The CST Difference Is ...

Simple

No matter how we cut it...

The color and strength go all the way through. Ask for

MONO-CAST®
ONE PIECE PAVER

Systems, Consistent Color And Quality Throughout Our Entire Product Line. www.cstpavers.com

STANDARD
This finish is the natural surface that is produced when a standard MONO-CAST® paver is made.

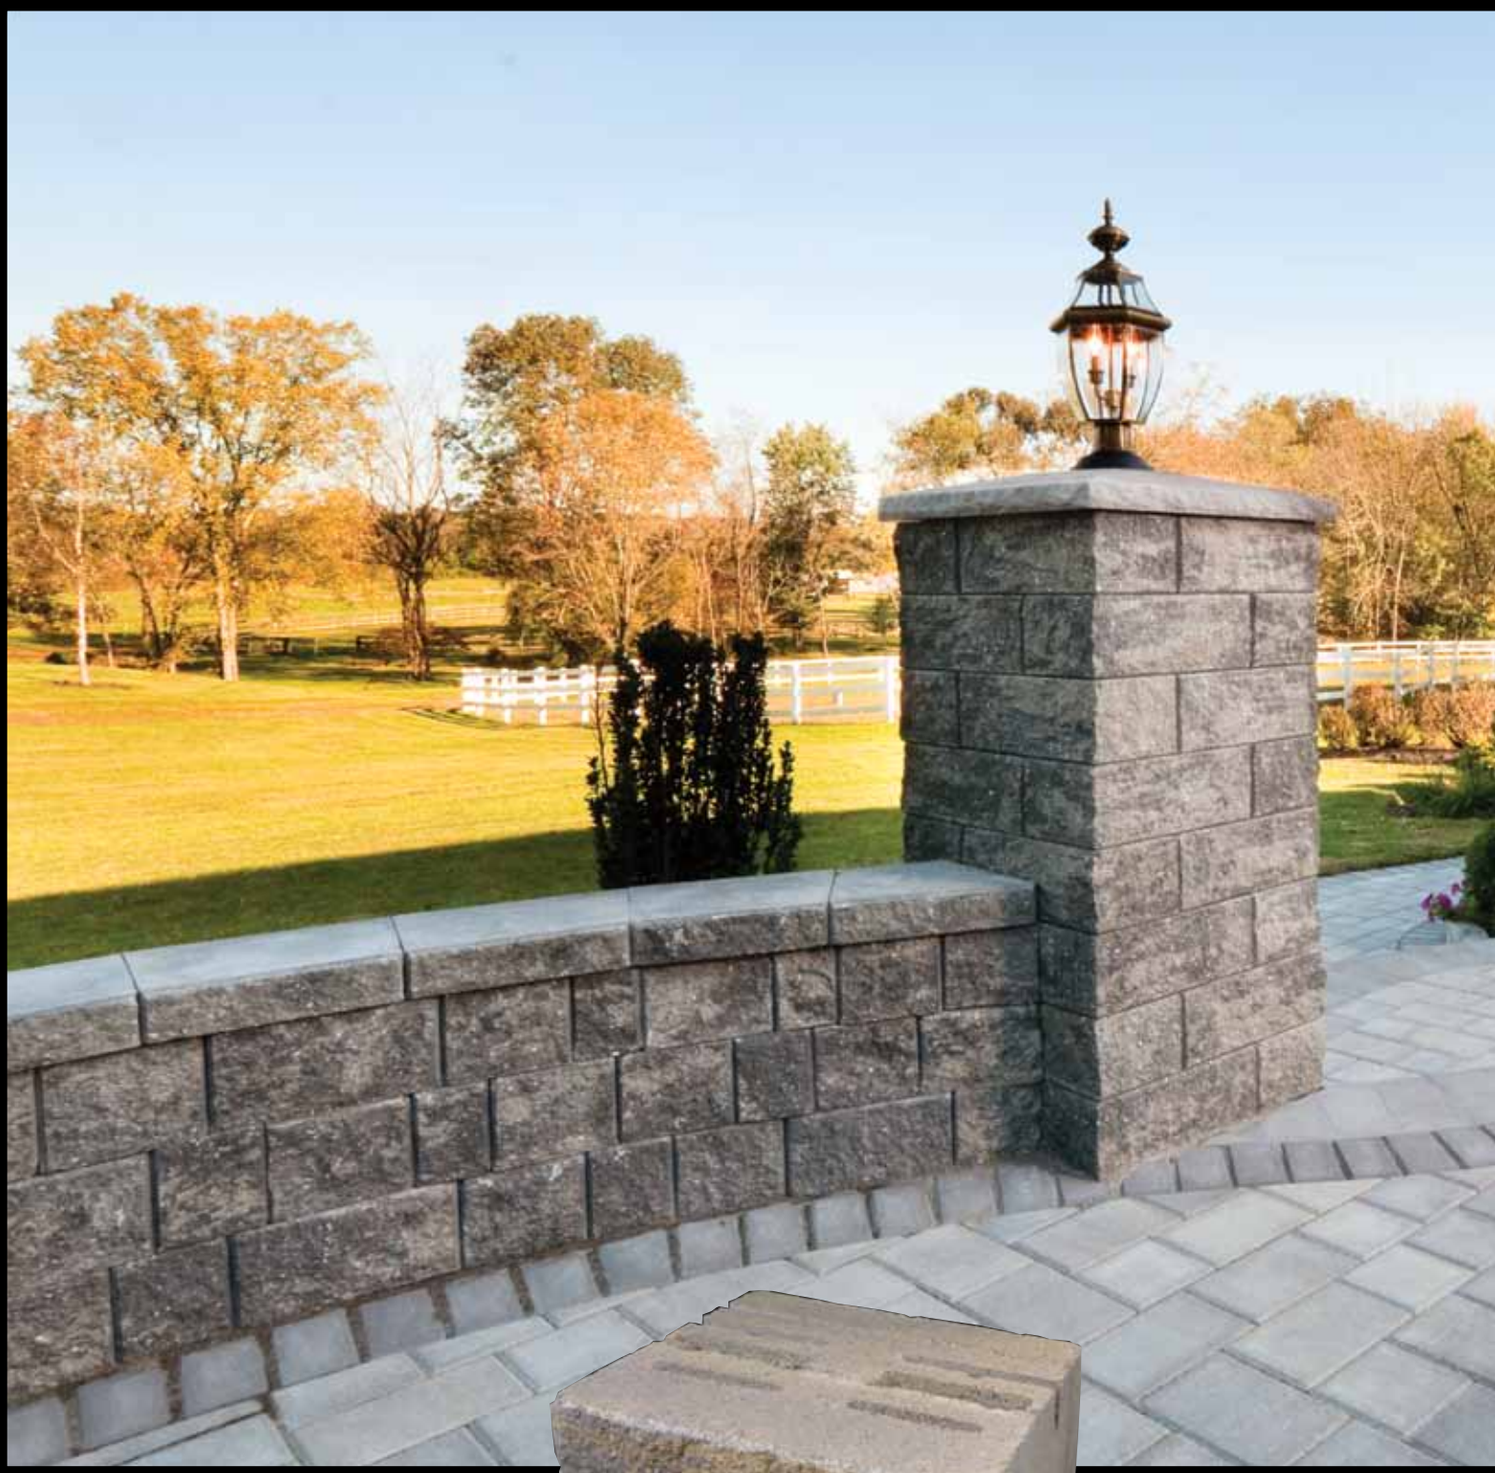
MILL-TEC™
The MILL-TEC™ finish is a process used to stress just the top surface of the paver. This results in a more consistent and uniform aged look.

MONO-CAST® PAVER

FINISH STYLES

ANTIQUED TEXTURE®

The Antiqued Texture® process takes a standard finish paver and "tumbles" the product, aging the paver to resemble an "old world" natural stone type appearance.



Standard
Our standard finish is a classic split-faced texture offering a distinctly attractive appearance to enhance any project.

SITTING & RETAINING WALLS

FINISH STYLES

Weathered™

Our vintage Weathered™ finish, which has a centuries-old, hand-hewn appearance, is perfect for historic renovations or to match existing stonework.

ULTRABELLE
COLLECTION

The Ultrabelle Collection is our new state of the art color enhancement process for CST pavers and wall products. Special color pigments blend with cements for a range of vibrant and full-bodied colors that are as unique as fine art. From the bright whites and tans of Ocean City Sand to the rich browns and golds of Potomac Valley, the Ultrabelle Collection offers an artist's palette of colors to help you create your own outdoor masterpiece.

The Ultrabelle Collection Is Available For The Following Products:

PAVERS:
- Bullnose
- Classic Brick
- Curbstone
- Edgestone
- Munich
- Ridgestone™
- Roman Cobble®
- Slate Stone
- Tuscany
- Vienna Classic

MIXING IT UP

Like painting a picture, you can create a captivating work of art with color. With some thoughtful consideration during the planning stages, there's really no mystery to figuring out the hues to use in your new environment. Don't be afraid to mix it up!

Mixing the Utrabelle colors adds a distinctive look that can replicate Mother Nature's own recipes for beautiful blends. Featured here is our Ridge Stone standard in Point Pleasant Blue, Cape May Green and Delaware River Mist in a herringbone pattern.

Journey back to the streets of ancient Europe to conjure up the appeal of this durable natural stone style paver. The perfect edger for your driveways or curbs for your streets, Curb Stone is a mix of form and function. This timeless concrete paver is inspired by the classic elegance of Belgium Block stone.

MONO-CAST® PERMEABLE *Series*

THE ANATOMY OF PERMEABLE PAVER CONSTRUCTION

Permeable Interlocking Concrete Pavement (PICP) comprises a layer of solid concrete pavers separated by joints filled with small stones. Water enters the joints between the pavers and into an "open-graded" base-crushed stone layer with no small or fine particles. The void spaces among the crushed stone store water and infiltrate it back into the soil subgrade. The stones in the joints provide permeability, and the base filters stormwater and helps reduce pollutants.

WHY USE A PERMEABLE PAVER?

Federal, state, and local sustainable site regulations hope to reduce environmental impacts of increased runoff from roofs and pavements. Permeable Pavers reduce runoff and pollutants, recharges ground-water, and helps reduce downstream erosion and flooding.

BEFORE & AFTER

CST teamed up with the NBC 10! Show to host a Backyard Makeover Contest.

Through a series of on-air announcements and promotions, viewers were asked to submit photos of their backyard and explain why they were deserving of the makeover. After an overwhelming number of submissions, Judy Manley of Cherry Hill, NJ was chosen to receive the backyard makeover courtesy of CST.

Offering an extensive overhaul of the lucky winner's backyard, including a new patio and fire-pit, the winning backyard makeover was revealed live on-air during a segment on the NBC 10! Show.

Check our website at www.cstpavers.com to find out how to win prizes and free give-a-ways for your before and after photos. While you are there have a look at this feature's video segment as seen on NBC's 10 Show.

"My experience with CST was more than I could have asked for. The CST House Call got the project started with design suggestions, product information and answers to my questions. The installation contractors did an amazing job bringing my customized design plan to life. The quality of the pavers ensure that I'll be enjoying my patio for years to come. I'm so pleased with the finished product that I recommend CST to anyone looking to recreate their backyard."

Thanks so much for everything!
~Judy

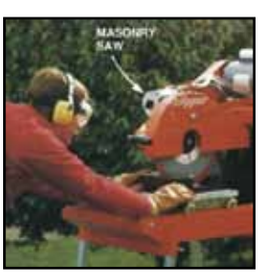
the 10! show

PAVING STONE INSTALLATION INSTRUCTIONS



Professionals and do-it-yourself homeowners alike can install interlocking concrete pavers successfully. You will probably have to rent some tools that the average homeowner does not have. If you take your time and pay close attention to the base preparation, you will be pleased with the results.

Excavation:

Before digging, always call your local utility company to locate any underground lines.

In general terms, a minimum of 4" of compacted aggregate base is recommended for patios and walkways, and 8" for residential driveways where freeze/thaw conditions exist. Add 3" for the depth of the bedding sand and the paver thickness to determine the total depth to excavate. Excavation should be 6" wider than the finished pavements dimensions on sides where edge restraint is to be used. Slope and grade are important to ensure proper runoff. It is best to plan at least a 1/4" per foot drop, but try not to exceed 1/2" per foot.

Base Preparation:

As with any building project, the finished pavers will be only as good as the construction of the base. For this reason, this is the MOST important part of the installation process.

First, run your plate compactor over the excavated area, making sure that the soil does not get stuck to the bottom of the plate tamper. Each pass should overlap the previous one by about 4". Compaction should be performed in one direction (north-south) then a second time at a right angle (east-west) to the first compaction. It is suggested that a soil separation fabric be laid down over the compacted sub grade, especially in moist or wet areas, to separate virgin soil from the base. Now spread your stone base material out evenly in a 2" layer. If material is dry and dusty, use a garden hose to evenly moisten it down. This will help make the gravel easier to rake and faster to compact.

Starting with the outer perimeter, use the plate compactor to pack together the base, again overlapping each pass about 4" and working towards the center. You should make at least two complete passes for each layer. Repeat this process for each subsequent layer of base material until the final thickness is achieved. After final compaction, check the entire area for proper pitch and level conditions. The base should now reflect the final grade of your pavers. If you were to place a straight edge on the surface, there should be no more than a 1/4" gap at any point along the straight edge.

Edge Restraints:

The borders for your layout design may now be put into place. The edging is laid directly upon the quarry process base and secured with 10" steel spikes. One spike should be used every (2) feet for walkways and patios and every one (1) foot for driveways and radii.

Sand Setting Bed:

A setting bed of concrete sand can now be spread on top of the compacted base. Note: It is important to keep your sand dry. Always keep your sand covered in case of rain. It is suggested that you only screed sand for areas where you will be laying pavers that same day. Lay the screed guides (1" outside diameter electrical conduit, strips of wood or other suitable rigid material) on top of the compacted base material 4'-6' apart and parallel. For narrow areas such as walkways, the PVC edging can be used as a guide with a notched 2x4" board. When the pavers are set on the sand and compacted, the 1" of sand will compress to 1/2" to 5/8" thickness.

Installation of Pavers:

All projects must start at a perfect 90-degree angle. Use the 3-4-5-triangle method to establish this. For an even mix of pavers, select pavers from multiple cubes for optimum color blending. Starting from a permanent edge such as a house, driveway, or even a piece of rigid PVC edge restraint, lay your first paver starting from either side. String lines will assist in assuring straight lines. Spacing between pavers should not exceed 1/8". Set pavers lightly on the sand, never press or hammer them in. If you are doing the project over a couple of days, cover the entire area with plastic overnight if rain is expected.

Compacting and Sweeping:

Spread and sweep sand over the entire top of the pavers using a stiff bristle broom. To protect the surface of the pavers prior to compacting, lay down a mat, cardboard, thin plywood or soil separation fabric on top of the spread sand. Vibrating with a plate compactor will force the sand between the joints, stabilizing and leveling the final surface. Excess sand should be swept in the joints. Sweep again as necessary.

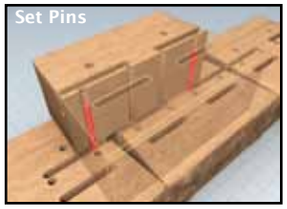
NOTE: DO NOT USE PLATE COMPACTOR ON CST WET CAST PRODUCTS.

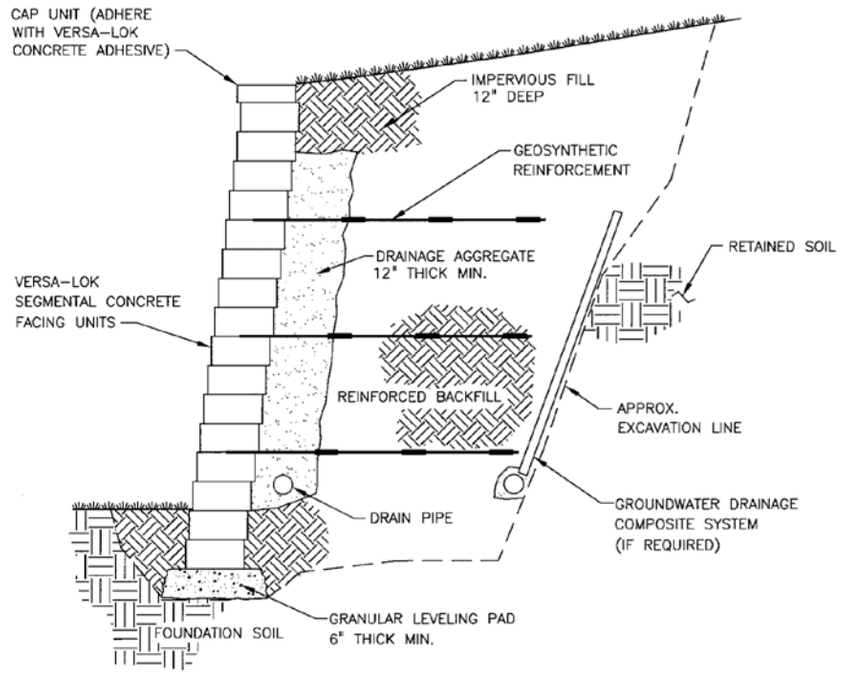
WARNING: CST recommends the use of a protective layer between the paving stones and the plate compactor used when doing the final compaction. This will avoid scratching the surface of the pavers. The application recommended is the use of a mat, cardboard, thin plywood, carpeting or soil separation fabric. CST suggests using one of these separators with ALL of our paving lines.

DO NOT USE PLATE COMPACTOR ON CST WET CAST PRODUCTS.

ADVERTENCIA: Se les recomienda usar una capa de proteccion entre medio de los tabiques y la maquina que se va a usar cuando aplasten los tabiques en el proceso final. Eston ayudara a prevenir que raspen la cara de el tabique. La aplicacion recomendada para esto es el uso de un tapete, caja de carton, una madera plana, usando una carpeta o una tela de tierra. CST suguiere que usen una de estas aplicaciones con todos sus productos.
NO UTILIZAR PLACA COMPACTADORA SOBRE CST WET CAST PRODUCTOS.

VERSA-LOK® INSTALLATION INSTRUCTIONS





Maximum height for an un-reinforced VERSA-LOK® wall is four feet. Individual site, soil and loading conditions (including terraces) may limit un-reinforced wall height to less than four feet. Taller walls require geosynthetic solid reinforcement and engineering assistance. For information on engineered preliminary designs, please contact your local dealer or CST representative.

1-Leveling pad preparation

VERSA-LOK® walls should be placed on a leveling pad of compacted gravel, crushed stone or coarse sand about 6" thick and 24" wide. The first course of VERSA-LOK® should be embedded below grade approximately 1/10 the of the exposed wall height. Excavate to lines and grades you've established for the wall, allowing for leveling pad and unit embedment.

2-Install base course

Place VERSA-LOK® units on prepared leveling pad. As you proceed, level each unit front to back, side to side and with adjacent units. Leveling is critical at this stage, so take your time. Align straight wall sections using a string line or by sighting down the grooves on the top of each unit. If your wall has a corner, begin at the corner and work out from there.

3-Backfill

Fill in and compact native soil behind, and in front of the base course level with the grade in front of the wall. Next, place and compact 13" of drainage aggregate behind the units.

4-Installing successive courses

Stack one course at a time. Set units back 3/4". Insert two pins in front holes of units so they fall into the rear slots of the units beneath. Tap pins down with a pin and mallet. Place and compact drainage aggregate behind each course as it is completed.

5-Geosynthetic soil reinforcement

If your wall is higher than four feet or shoulders significant loads, you will need to install geosynthetic soil reinforcement. As each course is laid, place soil reinforcement horizontally on top of compacted backfill and about one inch from the front of the VERSA-LOK® units.

6-Installing caps

Complete your wall by placing VERSA-LOK® cap units on the top course. Install caps with a slight overhang (recommended), set back or flush with the wall face. Use VERSA-LOK® concrete adhesive to secure cap units to wall.

Techniseal®

PREMIUM QUALITY PRODUCTS

You have chosen CST MONO-CAST® One-Piece Pavers for their long-lasting beauty. However, this high quality material is not impervious to oil and other substances. To preserve your pavers' original appearance, it is therefore important to clean and protect them in the correct way. Techni-Seal's line includes all the essential products for cleaning, protecting and maintaining your pavers.

Product	Look	Features/Functions	Sizes	Coverage
WET LOOK (WL4) PAVER PROTECTOR	Wet Look (water based) *(Solvent based avail.)	Enhances original colors. Forms a long lasting protective film. Protects against oil & dirt.	1 Gallon 5 Gallons	1 Gallon covers up to 150 sq. ft.
WET LOOK (WLS) PAVER PROTECTOR	Semi-Gloss (water based)	Protects against oil & dirt. Film forming.	1 Gallon 5 Gallons	1 Gallon covers up to 150 sq. ft.
CLEAR LOOK (EV) PAVER PROTECTOR	Natural Look Satin Finish (water based)	Protects against oil & dirt. Film forming. Easy to apply, no unpleasant fumes, environmentally friendly.	1 Gallon 5 Gallons	1 Gallon covers up to 175 sq. ft.
JSS-Stabilizing Sealant for Pavers and Joints	Satin Finish (water based)	Film forming. Bonds Sand in place within pavement joints.	1 Gallon 5 Gallons	1 Gallon covers up to 140 sq. ft.
NATURAL LOOK (iN) PAVER PROTECTOR	Invisible (water based)	Non-film forming. Soaks into the material, won't make slippery.	1 Gallon 5 Gallons	1 Gallon covers up to 120 sq. ft. for mandatory 2 coat application.
COLOR BOOST (WLP) PAVER PROTECTOR	Matte Finish (solvent based)	Non-skid finish ideal for pool decks. Non-film forming. Acts as a water & oil repellent.	1 Gallon	1 Gallon covers up to 120 sq. ft. for mandatory 2 coat application.
1 Gallon covers up to 120 sq. ft. for mandatory 2 coat application.	Invisible (water based)	Non-film forming. Repels water & dirt. Protects against salt & frost.	1 Gallon 5 Gallons	1 Gallon covers up to 150 sq. ft.
1 Gallon covers up to 150 sq. ft.		1 Gallon covers up to 150 sq. ft.	1 Gallon 5 Gallons	1 Gallon of concentrated product cleans 200 sq.ft
HC-Multi-surface Hardscape cleaner		Dislodges efflorescence and ground in dirt. Prepares for sealant.	1 Gallon 5 Gallons	1 Gallon of concentrated product cleans 800 sq.ft
Organic Stain Remover		Dissolves, dislodges stains.	25 oz.	Concentrated powder makes up to 2 gallons & cleans up to 200 sq ft.
RR-Rust Remover		Effectively removes stains caused by metal, rusted water, fertilizer, etc.	1 Quart	
PTR-Paint, Tar & Rubber Remover		Removes sealant, paint, tar or bitumen, rubber and chewing gum.	1 Quart	
RG+-Concrete Adhesive		Elastomeric resin-based compound. Remains flexible.	29 oz. Tube	
HP2 Polymeric Sand		High Performance. Cures quickly. Ideal for heavy traffic areas. Environmentally friendly. Maximum joint width 4.	50 lbs.	50 Lbs. Covers 60-75 sq. ft. with narrow joints, or 25-40 sq. ft. with wide joints.
RG+ Polymeric Sand	Granite Grey or Tan	Applied dry-Hardens after being misted. Inhibits weed growth. Strengthens interlocking & stabilizes.	50 lbs.	50 Lbs. Covers 60-75 sq. ft. with narrow joints, or 25-40 sq. ft. with wide joints.
HP Polymeric Sand	Granite Grey or Tan	High Performance. Ideal for highly exposed surfaces such as pool decks, sloped driveways, public ways, etc.	50 lbs.	50 Lbs. Covers 80-100 sq. ft. with narrow joints, or 30-55 sq. ft. with wide joints.

Note: Ask your CST Dealer for directions when sealing CST wet cast products.

The Online Difference

www.cstpavers.com
The destination for all of your paver needs.

idea scapes
Great ideas begin here

Before you put down one paver or stack one block-head over to www.cstpavers.com. Take advantage of an abundance of resources we have put online to help you with your next project. Our IdeaScapes photo gallery is filled with hundreds of photos neatly organized by project type to get ideas and inspiration for your next project.

Ask™ Steve
Have a question? He's got answers.

Questions?
Ask Steve, CST's virtual know-it-all.

How high can I build my retaining wall? Can a snow plow damage my pavers? How do I replace a stained or damaged paver?

Click "Ask Steve" at cstpavers.com and get your answers. Steve is ready when you are.

HOUSE CALLS™
Ideas, Advice and Support

How about a House Call?

That's right. CST makes House Calls. Visit www.cstpavers.com and sign up for a FREE in home consultation. A knowledgeable CST sales representative will make an appointment to visit you at your home with project ideas, samples and literature. Let the experts at CST give you some advice, answer any questions you may have and provide you with helpful tips on how you can make your project something special.

SINCE-1984

Warranty

CST provides a lifetime warranty on the structural integrity and deterioration (due to natural causes) of its paving stones and wall systems to the original purchaser of the product. Proof of purchase is required.

All products must be installed following CST and VERSA-LOK® installation guidelines. If any paving stone or wall units are found defective CST will replace the units. CST's responsibility is limited to the products and does not extend to the cost of installation or shipping. Due to the very nature of concrete products, we cannot guarantee the exact color match of the replacement units. CST prides itself in manufacturing its products to the highest standards.

CST products are made from natural materials which have variations in color and shade. The color photos in this brochure were prepared with great concern for accuracy. However, reproductions do not always precisely convey the color and texture of the actual product. We highly recommend that you visit an authorized CST Dealer's display to make your choice.

ALL PUBLISHED SIZES OF CST PRODUCTS ARE NOMINAL

Efflorescence, a natural and common occurrence in many concrete products. Efflorescence occurs when natural salts come to the surface and leave behind a white deposit that can normally be brushed off. Efflorescence is not a product defect therefore CST accepts no liability for its occurrence. Efflorescence will usually weather away with time.
